

## My Design Journal

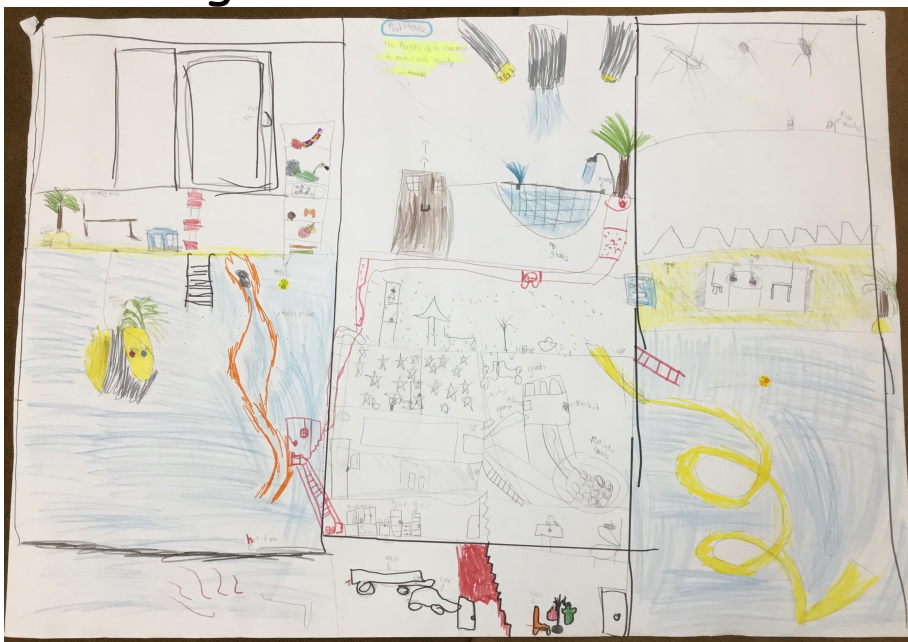

### The Pool House

By Carlotta

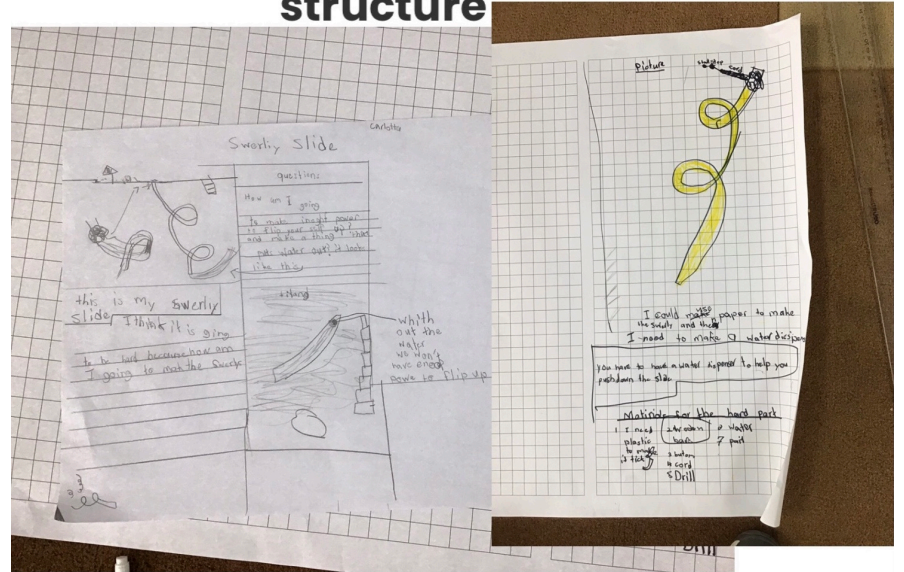

This is my plan of my Structure. I started drawing down my ideas. I felt happy because I could choose my own Design so I could choose any structure.

The name of my structure is the Pool House and the purpose of my structure is a house for living and swimming.

This is when I finished my plan. I felt exited because when you are done you can build it. And I like build things it is very fun. I learned that you really have to think if it is going to work when you build it.

## step 5 plan the hard part of the structure

I started thinking of how to make a water slide. I also thought about how to make a water dispenser. I drew pictures and added labels and wrote sentences. I had to use thinking skills so I could think how to make the water slide. These are my two challenges.

## Step 6- Investigating

This is when Chanwoong showed me how to make the light work it is very confusing and hard to understand. I watched a video to help me learn more about my water slide. The video told me lots of things about my water slide.

This is my water slide.

The best part was to make it because it is very fun because you can have lots of fun with the materials. And you can have fun building it. I used plastic wrappers and cardboard, plastic bottle, a little cup to catch the water when it is leaking. And I used some electric stuff to make the light. I used research skills when I watched the video.
